

We are a new and innovative company with more than 20 years of experience in many ranges of application of the powder compacting technology.

If you are looking for concepts and solutions to optimise existing processes, new products or applications, we are the right partner for you.

{besps}intro{/besps}

We assist you in

- development and planning of new products
- process optimization with existing products
- conception design for tooling in CAD
- automation integration for existing press systems
- process visualization for compacting technology and automatisation
- press trials for product optimization
- basic training courses and graphic dressing for the compacting technology
- selection and purchase of products for the powder compacting technology
- engineering of equipment and machines for special machine construction
- services and job order production

We offer to you

- experience of many years in the powder compacting technology
- experience in various pressing systems
- know-how in tool design and materials
- press technical know-how for all pressing methods
- engineering and consulting services
- preparation of technical advice
- service around powder compacting technology

Contact us!

We will present our achievements in a personal discussion to you.
